

Sustainit's Carbon Footprint 2013 to 2022, TCO_{2e}

We've been measuring our carbon footprint for 10 years! Apart from a few missing years in 2020 and 2021 (due to lots of changes with COVID and remote working), we've collected data since 2013. Our 22-23 data is our most complete yet, with a more comprehensive look at our Scope 3 emissions. So we can compare our emissions over time, we've assumed the same emissions from our new scope 3 emissions categories for historical years where we didn't have this information. Being able to track our emissions over this length of time means we can make actionable changes to reduce our impact.
